

## Silver Shield – A Natural Antibiotic

Most of us in the natural healing realm know about Colloidal Silver as a natural antibiotic. Patented in the United States in 1944, it became known for its ability in dealing with various infectious agents so that people did not always have to turn to a prescription antibiotic with all of the negative side effects. However, there were certain drawbacks to the original formula compared to the new Silver Shield which was patented in 2006. This new Silver is better than the original Colloidal Silver which came in higher concentrations and acted like a jackhammer.

Disinfectants are usually known as the first line of defense to kill disease with antibiotics following closely behind as the second line of defense if the bacteria become life threatening. However, all disinfectants are toxic to human beings – even the fumes are toxic.

Silver Shield is an effective disinfectant that is non-toxic yet routinely can disinfect the tiniest parts of our cells. It can be taken every single day as a preventative and reduces the burden on the immune response so there is no longer a need for a super immune function. It even helps prescription antibiotics do a better job because it will kill what an RX drug misses, while reversing the damage caused by antibiotics.

Silver Shield kills bacteria one cell at a time in the body while protecting the good bacteria and you don't have to worry about causing an imbalance of yeast. In fact, it can kill *Candida Albicans*. Silver Shield destroys viruses and prevents them from duplicating themselves while reducing inflammation and promoting wound healing.

The EPA has given this product a "non-toxic" status. There have been eight different toxicology studies run on Silver Shield. Congress has requested it be stockpiled against bioterrorism and pandemics. Homeland Security even considers Silver Shield an excellent biodefense against SARS.

How does Silver Shield work in killing such dangerous infectious agents such as MRSA, STAPH, STREP, Rinovirus, Malaria, Salmonella, Bubonic Plague, TB, Anthrax and many other life threatening virus and bacteria?

Silver Shield can maintain a magnetic field. This means the silver solids are so tiny they are smaller than the water particles and they can keep their charge while suspended in the water. They are nano particles – ionic silver oxide – 5-40 parts per million antimicrobial particles. What makes this product safer than Colloidal Silver formula is that the Silver Shield is 100% pure silver instead of the 98% that was used in the original formula. Any impurity can cause damage to different chemical properties.

Common ionic silver has a single charge while Silver Shield is a super charged particle and carries the ability to neutralize an unlimited number of pathogens. It supercharges the oxide coating – catalytic capabilities—so it can continue to neutralize one bacteria after another. It neutralizes the toxins and then recharges itself so it can continue doing so without limits. The Silver Shield can kill at lower concentrations that is why it can be used as a preventative.

Silver Shield kills pathogens on contact by pulling off one electron. The bacteria cell membrane is ruptured and the cell dies. The magnetic resonance acts on viral DNA. The silver nano particle is magnetically attracted, bonds to and overpowers viral DNA causing it to bind into a very tight ball of genetic material. This makes the DNA unable to stretch out so it cannot replicate and it never will divide or multiply rendering the virus inactive.

It is great for respiratory infections, nasal infections and can be used on any orifice of the body internally and externally. Some of our most dangerous invaders enter through the orifices.

It is antiviral which means it can be used for Hepatitis B and Epstein Barr.

Silver Shield is analgesic and great for ear infections. Put four drops in and tilt the head toward the ceiling for ten minutes. It only takes six seconds to kill an ear infection. Infection is gone in one night.

The Center for Disease Control (CDC) instructed physicians NOT to give antibiotics for ear or sinus infections because they only serve to make them worse. Of course, many doctors do not heed this advice. 70% of all children have antibiotics prescribed for ear infections by the age of three; 90% by the age of five. Most of these kids are not given a probiotic to offset the damage and then the cycle of ear infections/antibiotics is begun.

We know that antibiotics are failing because the bacteria are intelligent and know how to mutate. However, they aren't smart enough to get past the Silver Shield. This product allows more clearing of the pathogenic organisms.

Silver Shield is common sense medicine meaning it makes sense to take 1 teaspoon a day for prevention. If you are exposed to illnesses, take 2 teaspoons a day.

70% of all contagious diseases are contracted through hand contact. Rub the Silver Shield directly on your hands. It will kill bacteria in 6 minutes.

Silver Shield is stable. It can stay in suspension for up to 8 years even if it is frozen or boiled. There are over 80 published studies documenting its benefits to organs and structures of the body.

If you would like to know more about this product or purchase some for your medicine cabinet, contact Susan at the number or email address on her web site. She is making this product available wholesale. If you are a member of Nature's Sunshine, you can order it direct.

Please let me know if I can help you.

Sincerely,  
Susan
